DETAILED ACTION

Election/Restrictions

1. Applicant's election without traverse of claims 1-6 in Paper No. 5 is acknowledged.

Priority

2. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Drawings

3. This application has been filed with informal drawings which are acceptable for examination purposes only. Formal drawings will be required when the application is allowed.

Specification

4. The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

6. Claims 1-2, 4-5 are rejected under 35 U.S.C. 102(b) as being anticipated by Adachi et al. (US 5682070).
7. Adachi teaches the structure of a generator for use in a vehicle having:

a stator (5) having a stator core (51) and a stator winding (52) wound around said stator core; and

a rectifier (18) for rectifying an AC output of said stator, said AC generator further comprising:

a connection latch portion (172a, 173a, 174a) formed at an end portion of each of conductor wires (53a, 53b, 53c) constituting said stator winding in such a manner as to have a mounting hole,

wherein each of said connection latch portions is formed like a plate,

wherein said conductor wires have a rectangular cross section are connected to said rectifier by passing mounting screws through the mounting holes to thereby fasten and fix said connection latch portions to mounting seats of said rectifier (Lines 10-30 Column 9).

Claim Rejections - 35 USC § 103

8. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

9. Claims 3 and 6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Adachi et al in view of common knowledge in the art.

Adachi discloses the claimed invention except for the thickness of the connection latch portions.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to make the connection latch portions to have a thickness nearly equal to the

Art Unit: 2834

thickness of the conductor wires, since it has been held that where the general conditions of a claim are disclosed in the prior art, discovering the optimum or workable ranges involves only routine skill in the art. In re Aller, 105 USPQ 233.

Conclusion

10. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. See PTO-892.
